

# FLEXIX

## FRONTEND BUILDER

Web Frontend Builder is a user-friendly web app that lets you create frontends for websites without the need for coding. It simplifies the process and saves you time by providing drag-and-drop functionality and pre-built components. Plus, it offers seamless API integration, making it effortless to view real-time results. With Web Frontend Builder, anyone can design professional-looking web interfaces quickly and easily.

## FEATURES

### Create a Website

You can design and create your website to be visually appealing and beautiful using user-friendly tools through the UI interface

### Customize CSS (Tailwind)

You can easily customize the style of your website using CSS templates from Tailwind.

### Edit The Code

You can edit the code yourself through the web-based editor on the website.

### API Connection

You can enhance your website by connecting to APIs through a user-friendly UI. Simply input the API URL you want to use and select the data mappings between your website and the API.

### Show Results

You can immediately preview the results of the designed website on-screen.

### Export Project

You can download the source code to further develop it in the future.
